“In the third quarter, our first 90 nanometer logic product moved into mass production at our 300 millimeter facility in Beijing,” said Dr. Richard Chang, Chief Executive Officer of SMIC. “Elpida’s 512M-bit DDR2 DRAM using the 90 nanometer manufacturing process also moved into mass production. Our second 90 nanometer DRAM product for Qimonda will go into commercial production in the fourth quarter 2006. In the third quarter, 90 nanometer technology contributed 4.9% of total wafer revenues.

We are also pleased to announce that SMIC entered into a strategic agreement with Qualcomm. We will provide integrated circuit manufacturing services to Qualcomm using a specialized BiCMOS process technology at our Tianjin facility. This agreement will combine SMIC’s wafer fabrication capabilities and subcontractor infrastructure with Qualcomm’s leadership in 3G wireless technologies, with a focus on power management ICs.

We continue to see customers going through a period of inventory correction carrying over into the fourth quarter. This inventory situation is improving and depending on the holiday sell-through, it may continue to improve.

As we manage for the long-term, we will continue to march ahead towards the leading edge technology frontier. We will continue to invest significantly in research and development. Our development of the 65 nanometer technology is expected to bear fruit in the second half of 2007. We will expand our business in a financially disciplined manner with the clear goal of returning to profitability.”
